

Litepaper

Societies have evolved over thousands of years from the human needs of conservation, belonging and prosperity. With the advent of settlements, the need of conservation has been met. However, the need for belonging, something deeply ingrained in all of us, is ever present. With the exponential advancement of technology we can be anywhere or everywhere we want to be, at almost any time. We are at a point of global identity, and we are building the tools to create a Super Society. Superciety is here to deliver identity, belonging, purpose and prosperity to its Contributors.

Our main focus is You, the Supercitizen. We are developing a social platform where you will create your profile with experience, talents, skills and whatever you like to do and are good at. **Superciety** is a launchpad for individuals and projects rooted in the Elrond blockchain. A place for building, using and sharing all the tools that will help grow a better Society. Superciety will be the central place to interconnect Fellowships with Supercitizens, providing tools for collaboration and community developments with **\$SUPER** as the base currency.

**Superciety is an ecosystem
of distributed power,
collaboration & fun.**

**A social infrastructure that
allows builders all around
the world to come together
and work on something they
believe in – a shared goal &
philosophy.**

**Building a better society,
a super society is just a
side-effect.**

In all of that, we care about creating automated & autonomous systems with a minimum of bureaucracy, full transparency, and shared ownership that serves the general public. This is our way of creating the ever-promised society of the people, by the people, for the people.

**Over the years
Superciety will release
many products &
services, but most
importantly, we see
Superciety as a
product in itself.**

One that needs constant improvements (product iterations) based on the constructive feedback received from the community (fast feedback-loops). It's our way of working.

SuperID

Supercitizens are people like you and me, and the way we know each other is through the identity service we call **SuperID**.

SuperID contains information about us that is used to prove authenticity & trust to the people we interact with & potentially work within Superciety. This may include personal information like your name, your origin, a free-to-choose picture in form of an NFT, a trust level, social connections, past contributions, and many other data points that help give people an idea of who we are.

SuperID how people know you in Superciety.

**Superciety is
a place where
anyone can
start or find
self-sufficient
communities
that work
towards a
shared goal.**

They operate using their own **ESDT token** as a financial resource and have their own **governance system** in place. We call these communities Fellowships.

They have many similarities to what we know as **DAOs** (Decentralized Autonomous Organization) and are a place of progress, fun, purpose & belonging.

Supercitizens can contribute to the progress of Fellowships with their unique set of skills & talents, and get rewarded for their contributions in a trustless form in the native ESDT token of a Fellowship. These rewards will be newly minted.

Working for a Fellowship means you are your own boss, your talents are your income source, and no one takes a huge cut on your earnings for being the middleman.

Traits, that will attract experts in different fields that will help build tools that are owned by all Supercitizens.

With Fellowships, you are not in a factory setting and your work will never be meaningless since you only work on what you choose to work on.

Whether you're a developer, an artist, a visionary, or a temporary spectator, Supercity is where you will want to be. It is the modern way of work & collaboration.

Superciety will also offer a various and expanding set of public services. These will require its users to either hold or trade **\$SUPER.**

A lot of these traded tokens will be burned, decreasing the total supply & possibly leading to SUPER becoming deflationary – or only slightly inflationary.

**BUY/HOLD or
TRADE **\$SUPER**.**

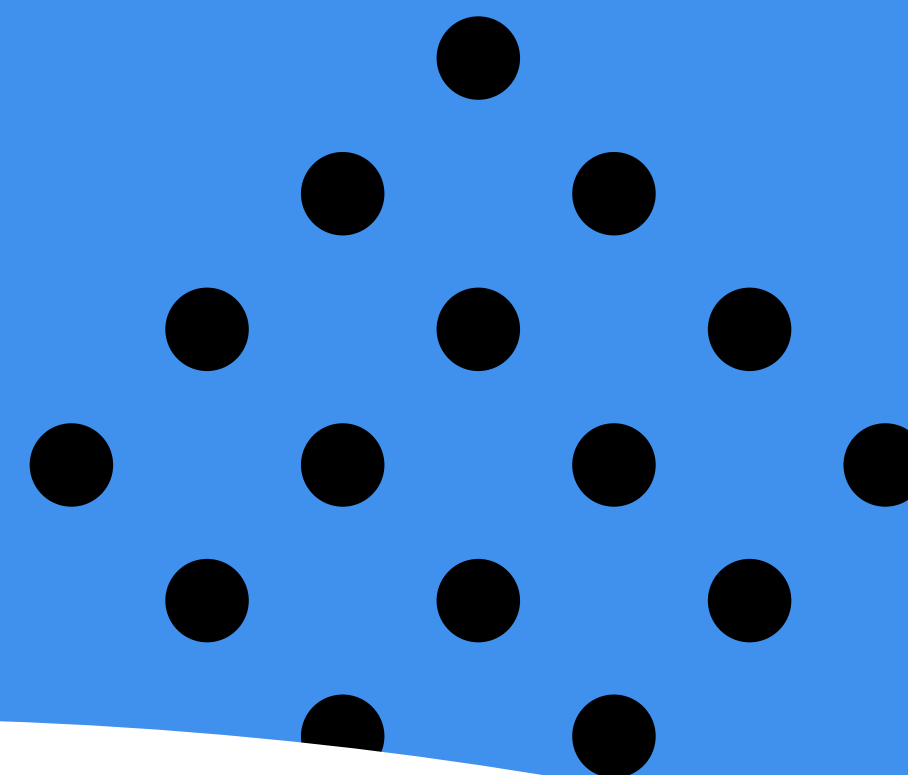

In addition to that, SUPER is also our governance token.

Everyone who owns SUPER will be able to take part in community voting which steers the future of Superciety.

Superciety itself will transition to being a fully autonomous Fellowship in the future. As a result of the above, the power of your vote is proportional to how useful you have been to the common good in the past.

The Superciety ecosystem is designed to shift wealth & voting power to those who are deliberately useful to the common good, which is not only leading to better decision making but most importantly taking away power from individuals that have proven damaging to our society in the past.

Vision

Our vision is to create a solid foundation where individuals, known as **Contributors**, can share their skills and talents to earn income, or to make a living in a trustless manner.

We aim to create the central place of communities, driven by projects, called **Fellowships**.

We are building an ecosystem to solve problems and craft solutions.

Superciety's building concept is simple. It is the place to connect the visionaries and the builders of a better society. A place to connect contributors within an ecosystem of fellowships.

Contributors can propose projects to the community to get constructive feedback, pull together the team of necessary resources, and start building. Every Supercitizen that is part of a fellowship is adding value and energy that is then rewarded in a trustless format, with **\$SUPER**.

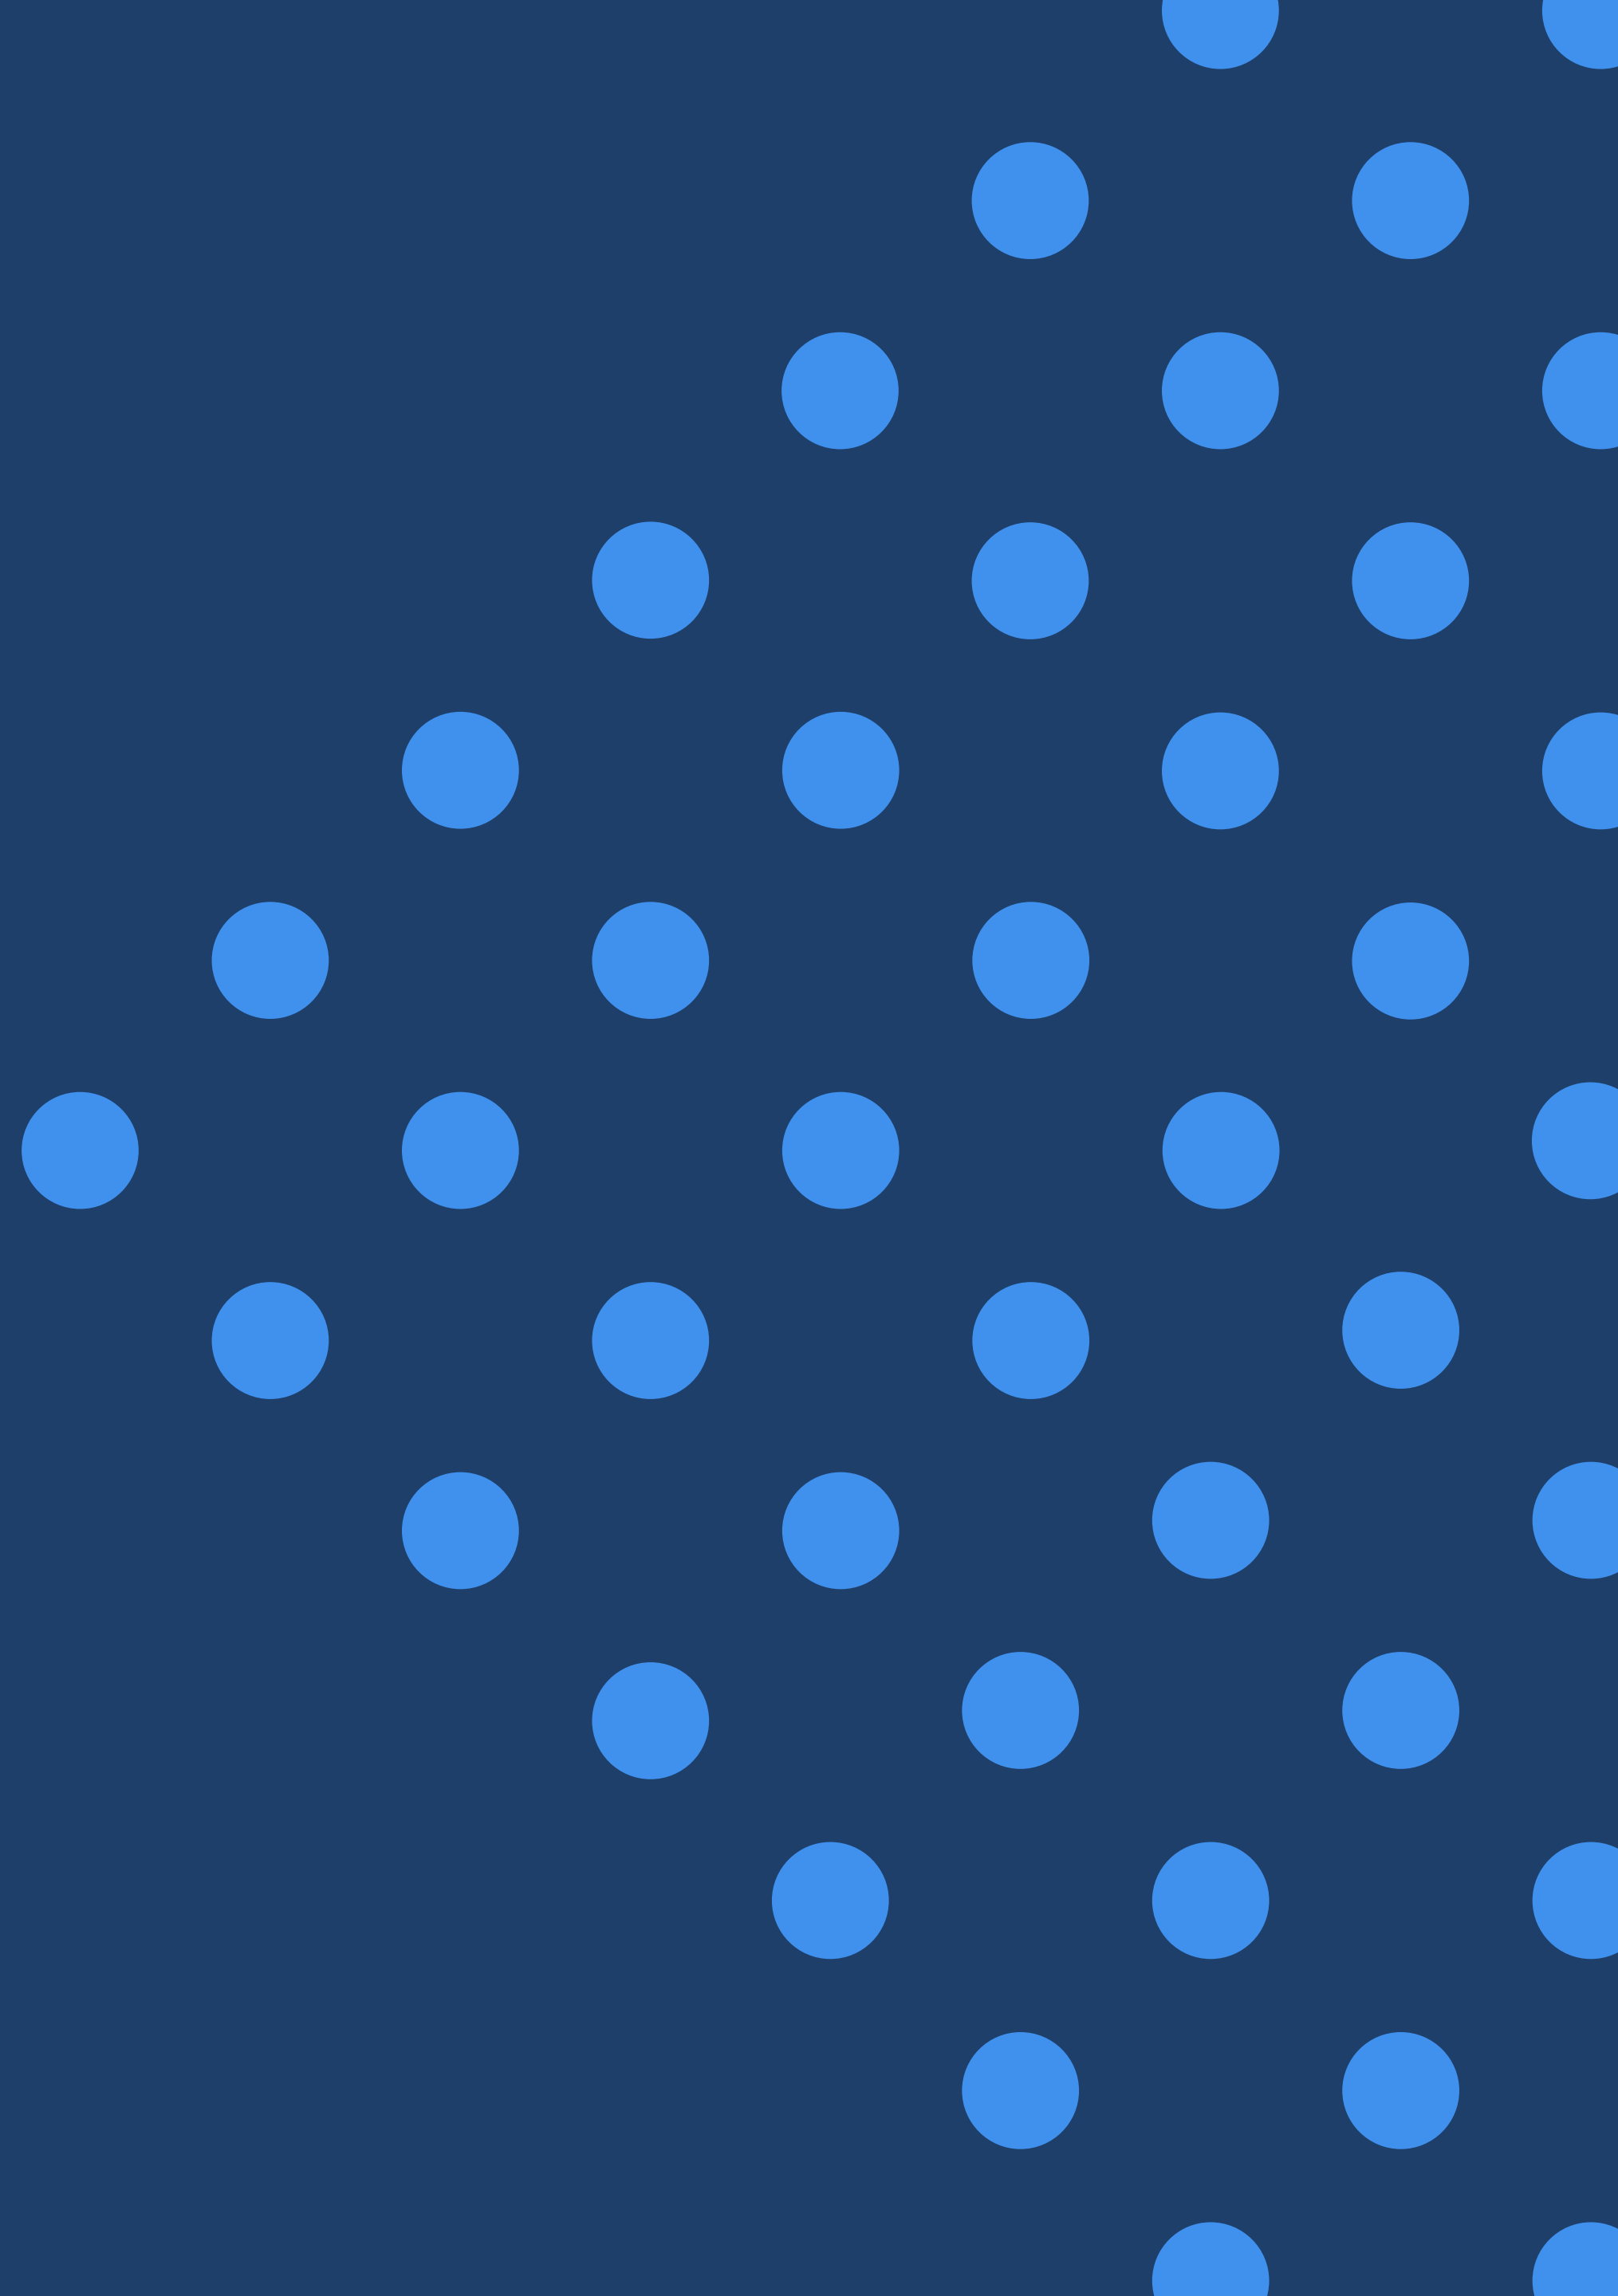

In this system, Fellowships can quickly become DAOs and can even have their own ESDT token if determined necessary, or the financial model requires it.

Basically anyone can develop a project and present it to Superciety.

Perhaps you are a construction engineer but you are passionate about editing videos. Here, you can release your inner Youtuber and make presentations for your favorite causes, NFT's or whatever fellowships you may be interested in.

As the fellowship succeeds with your predetermined contributions, you will be rewarded in \$SUPER.

Why Supercociety?

Supercitizens are at the heart of Superciety's operation and the platform will be governed entirely by the token holders.

Votes will be carried out in proportion to the number of tokens held.

Token holders will propel Fellowships by using \$SUPER (or the native Fellowship ESDT) as the currency, paying to access community-owned products & services.

All Fellowships will have access to the various Quest Proposals being submitted.

Maybe you need a logo for your project or some help on the development of a smart contract.

Then, submit a quest!

Contributors will be able to see your quest and offer their help.

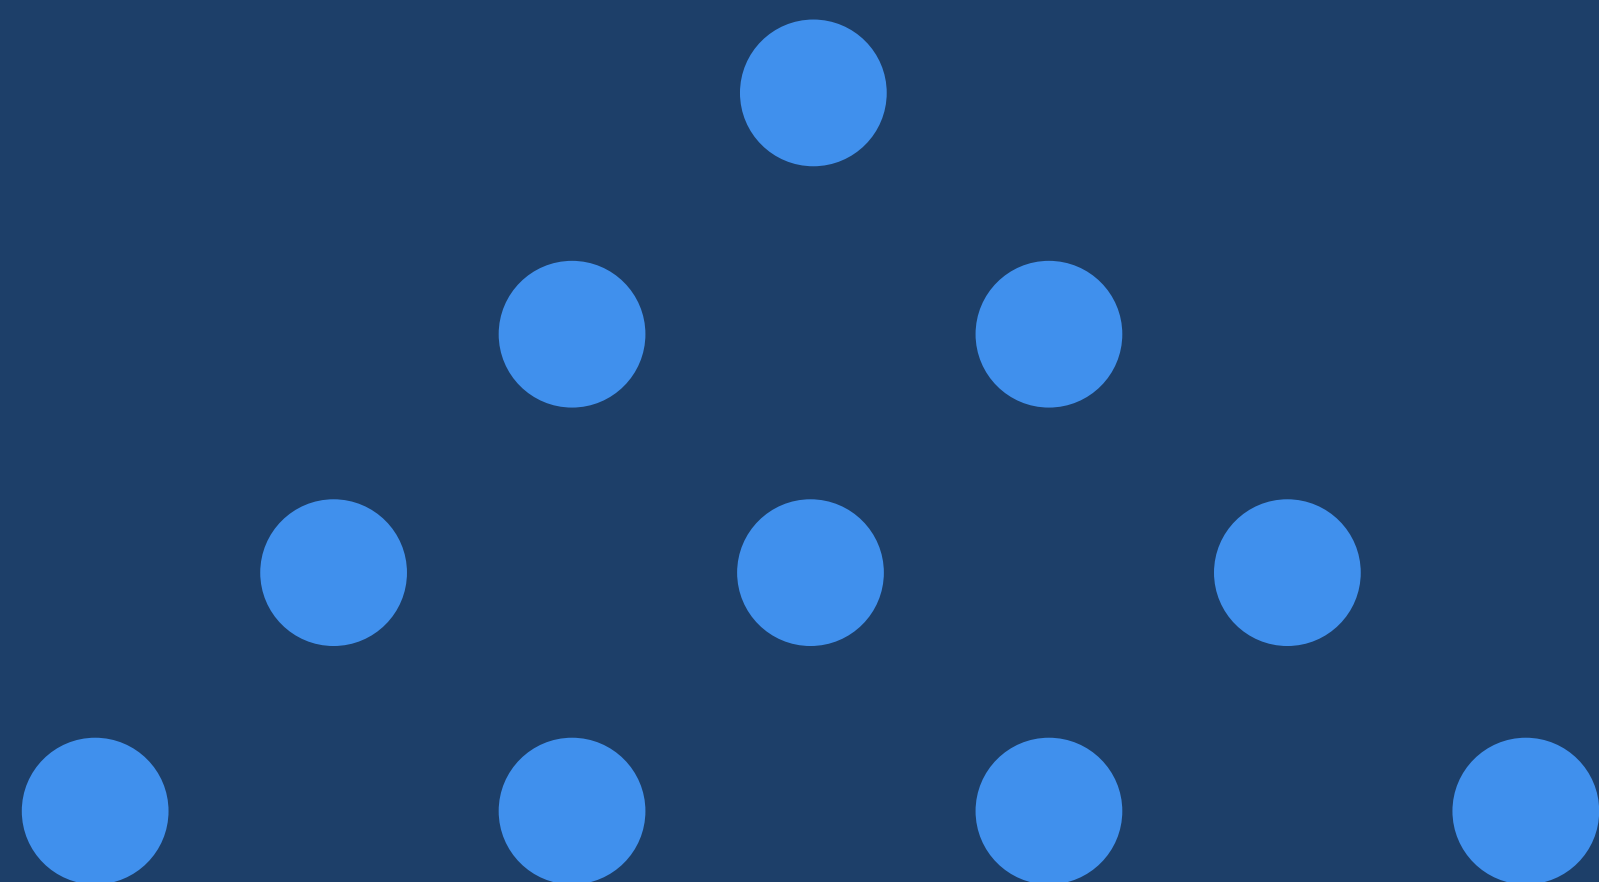

The quest can include an endowment, in \$SUPER, for the contributor. To avoid any dispute, the reward tokens will be stored in a smart contract while the quest is being carried out.

But, what is the point of registering a fellowship on Superciety, besides the visibility?

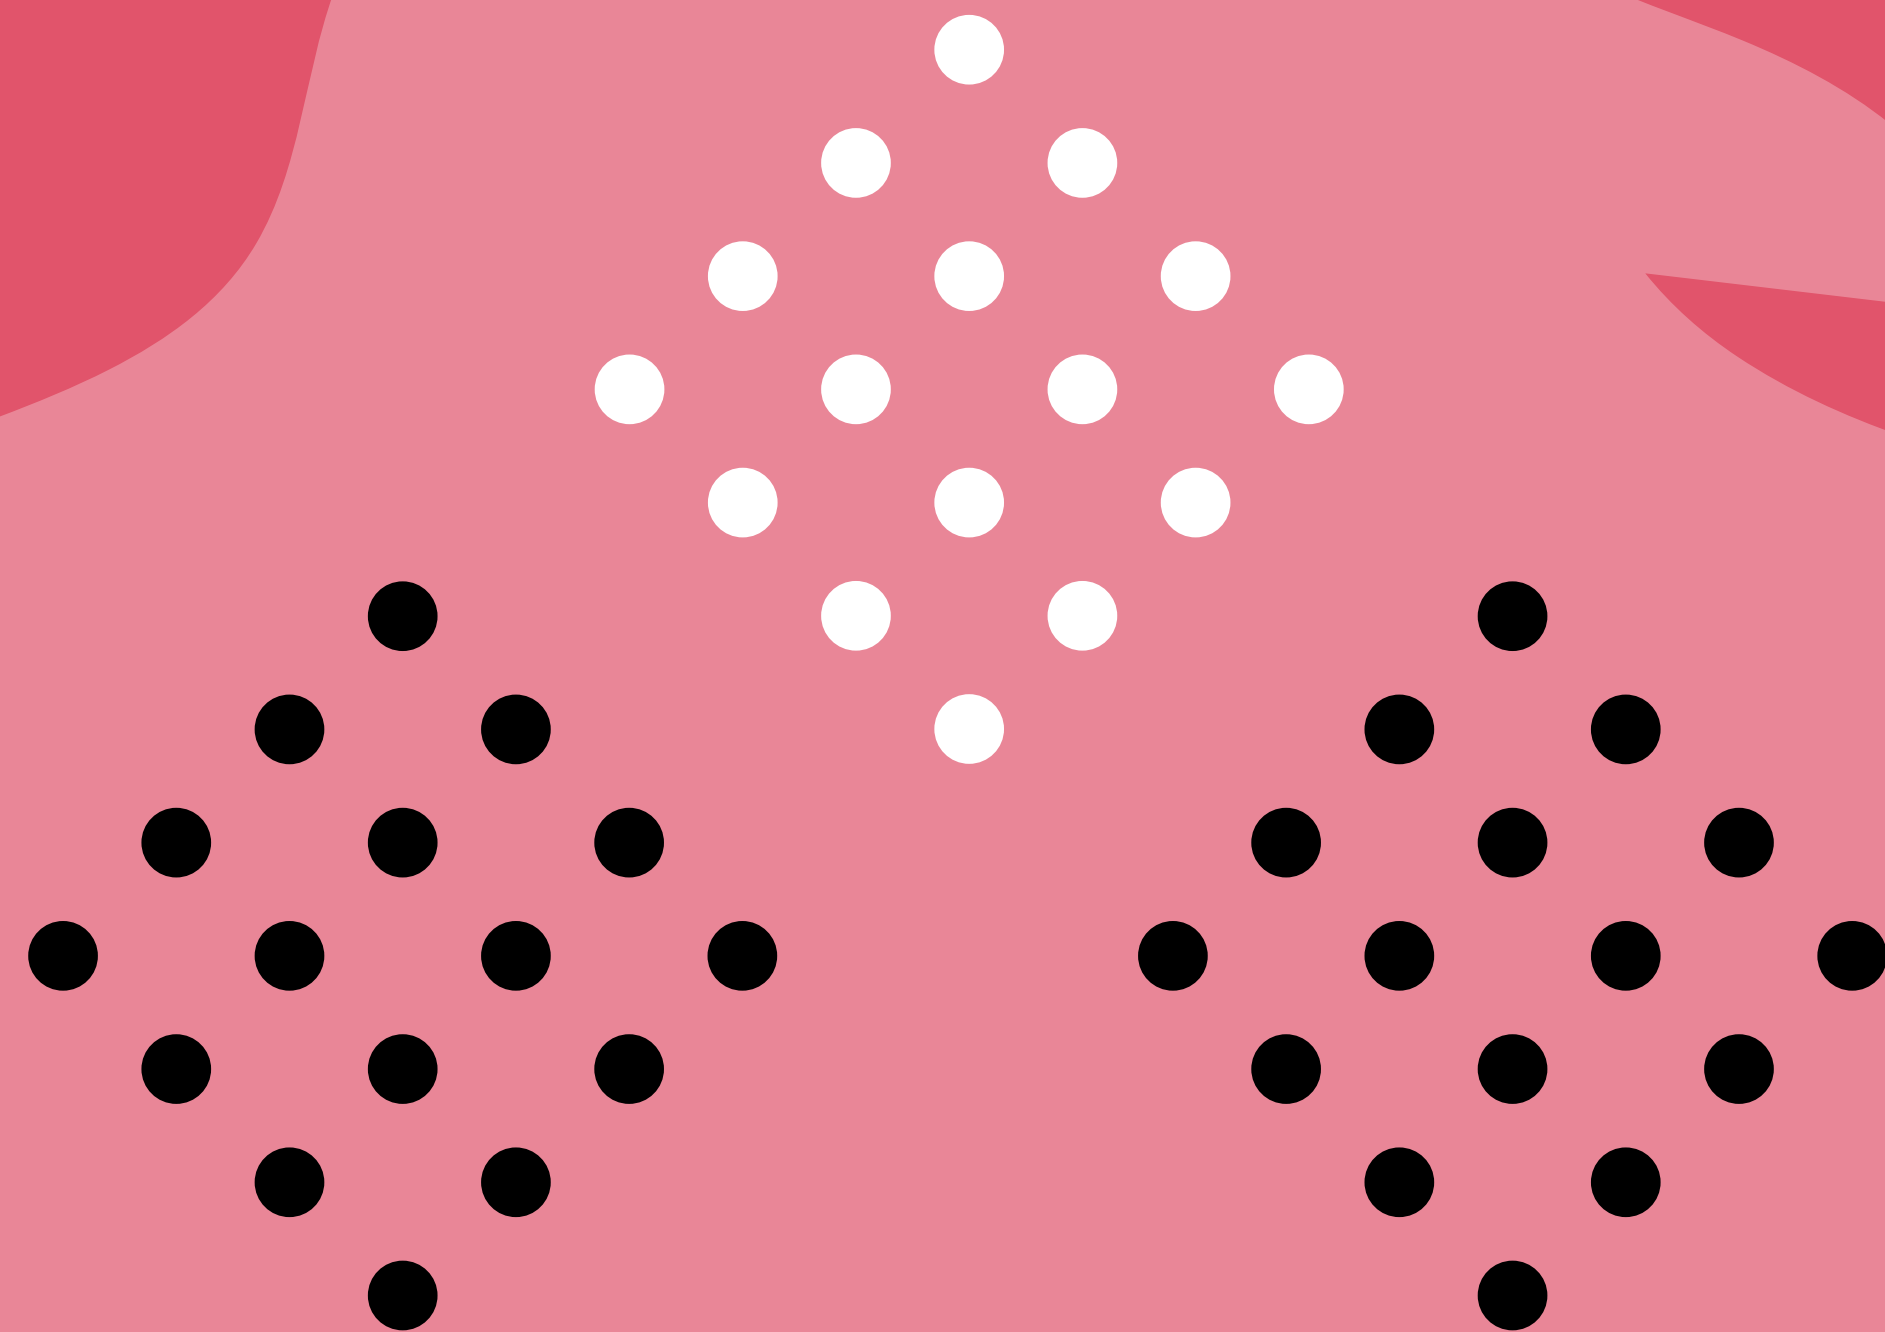

The community of support and a vision for a better society!

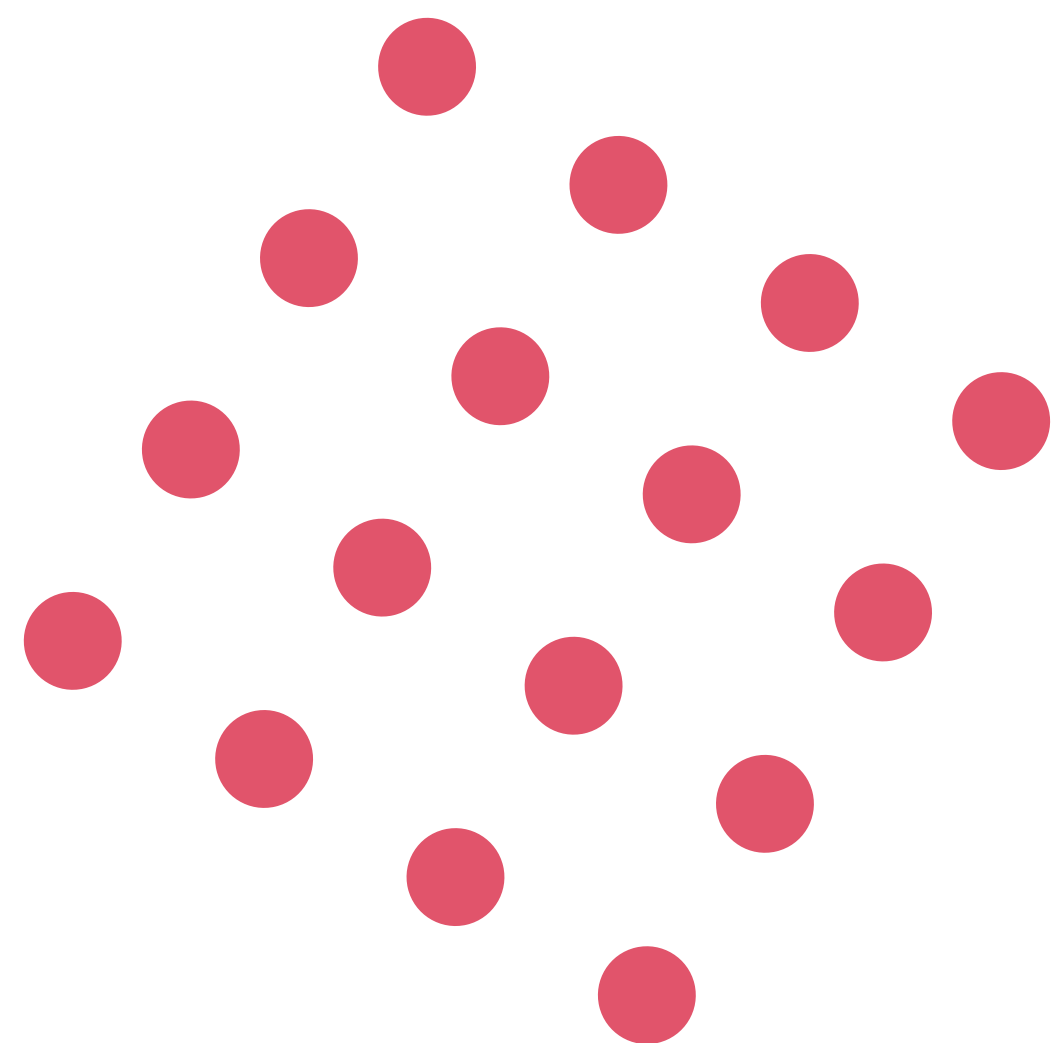

To attract the top talent for the right fit, no matter what the project or Quest involves.

To use the launchpad and all the community-owned tools to envision, fund and strategically execute your project goals.

Launchpad

Every month, two springboards will be organized to promote the best projects in the ecosystem.

1

An innovation springboard,

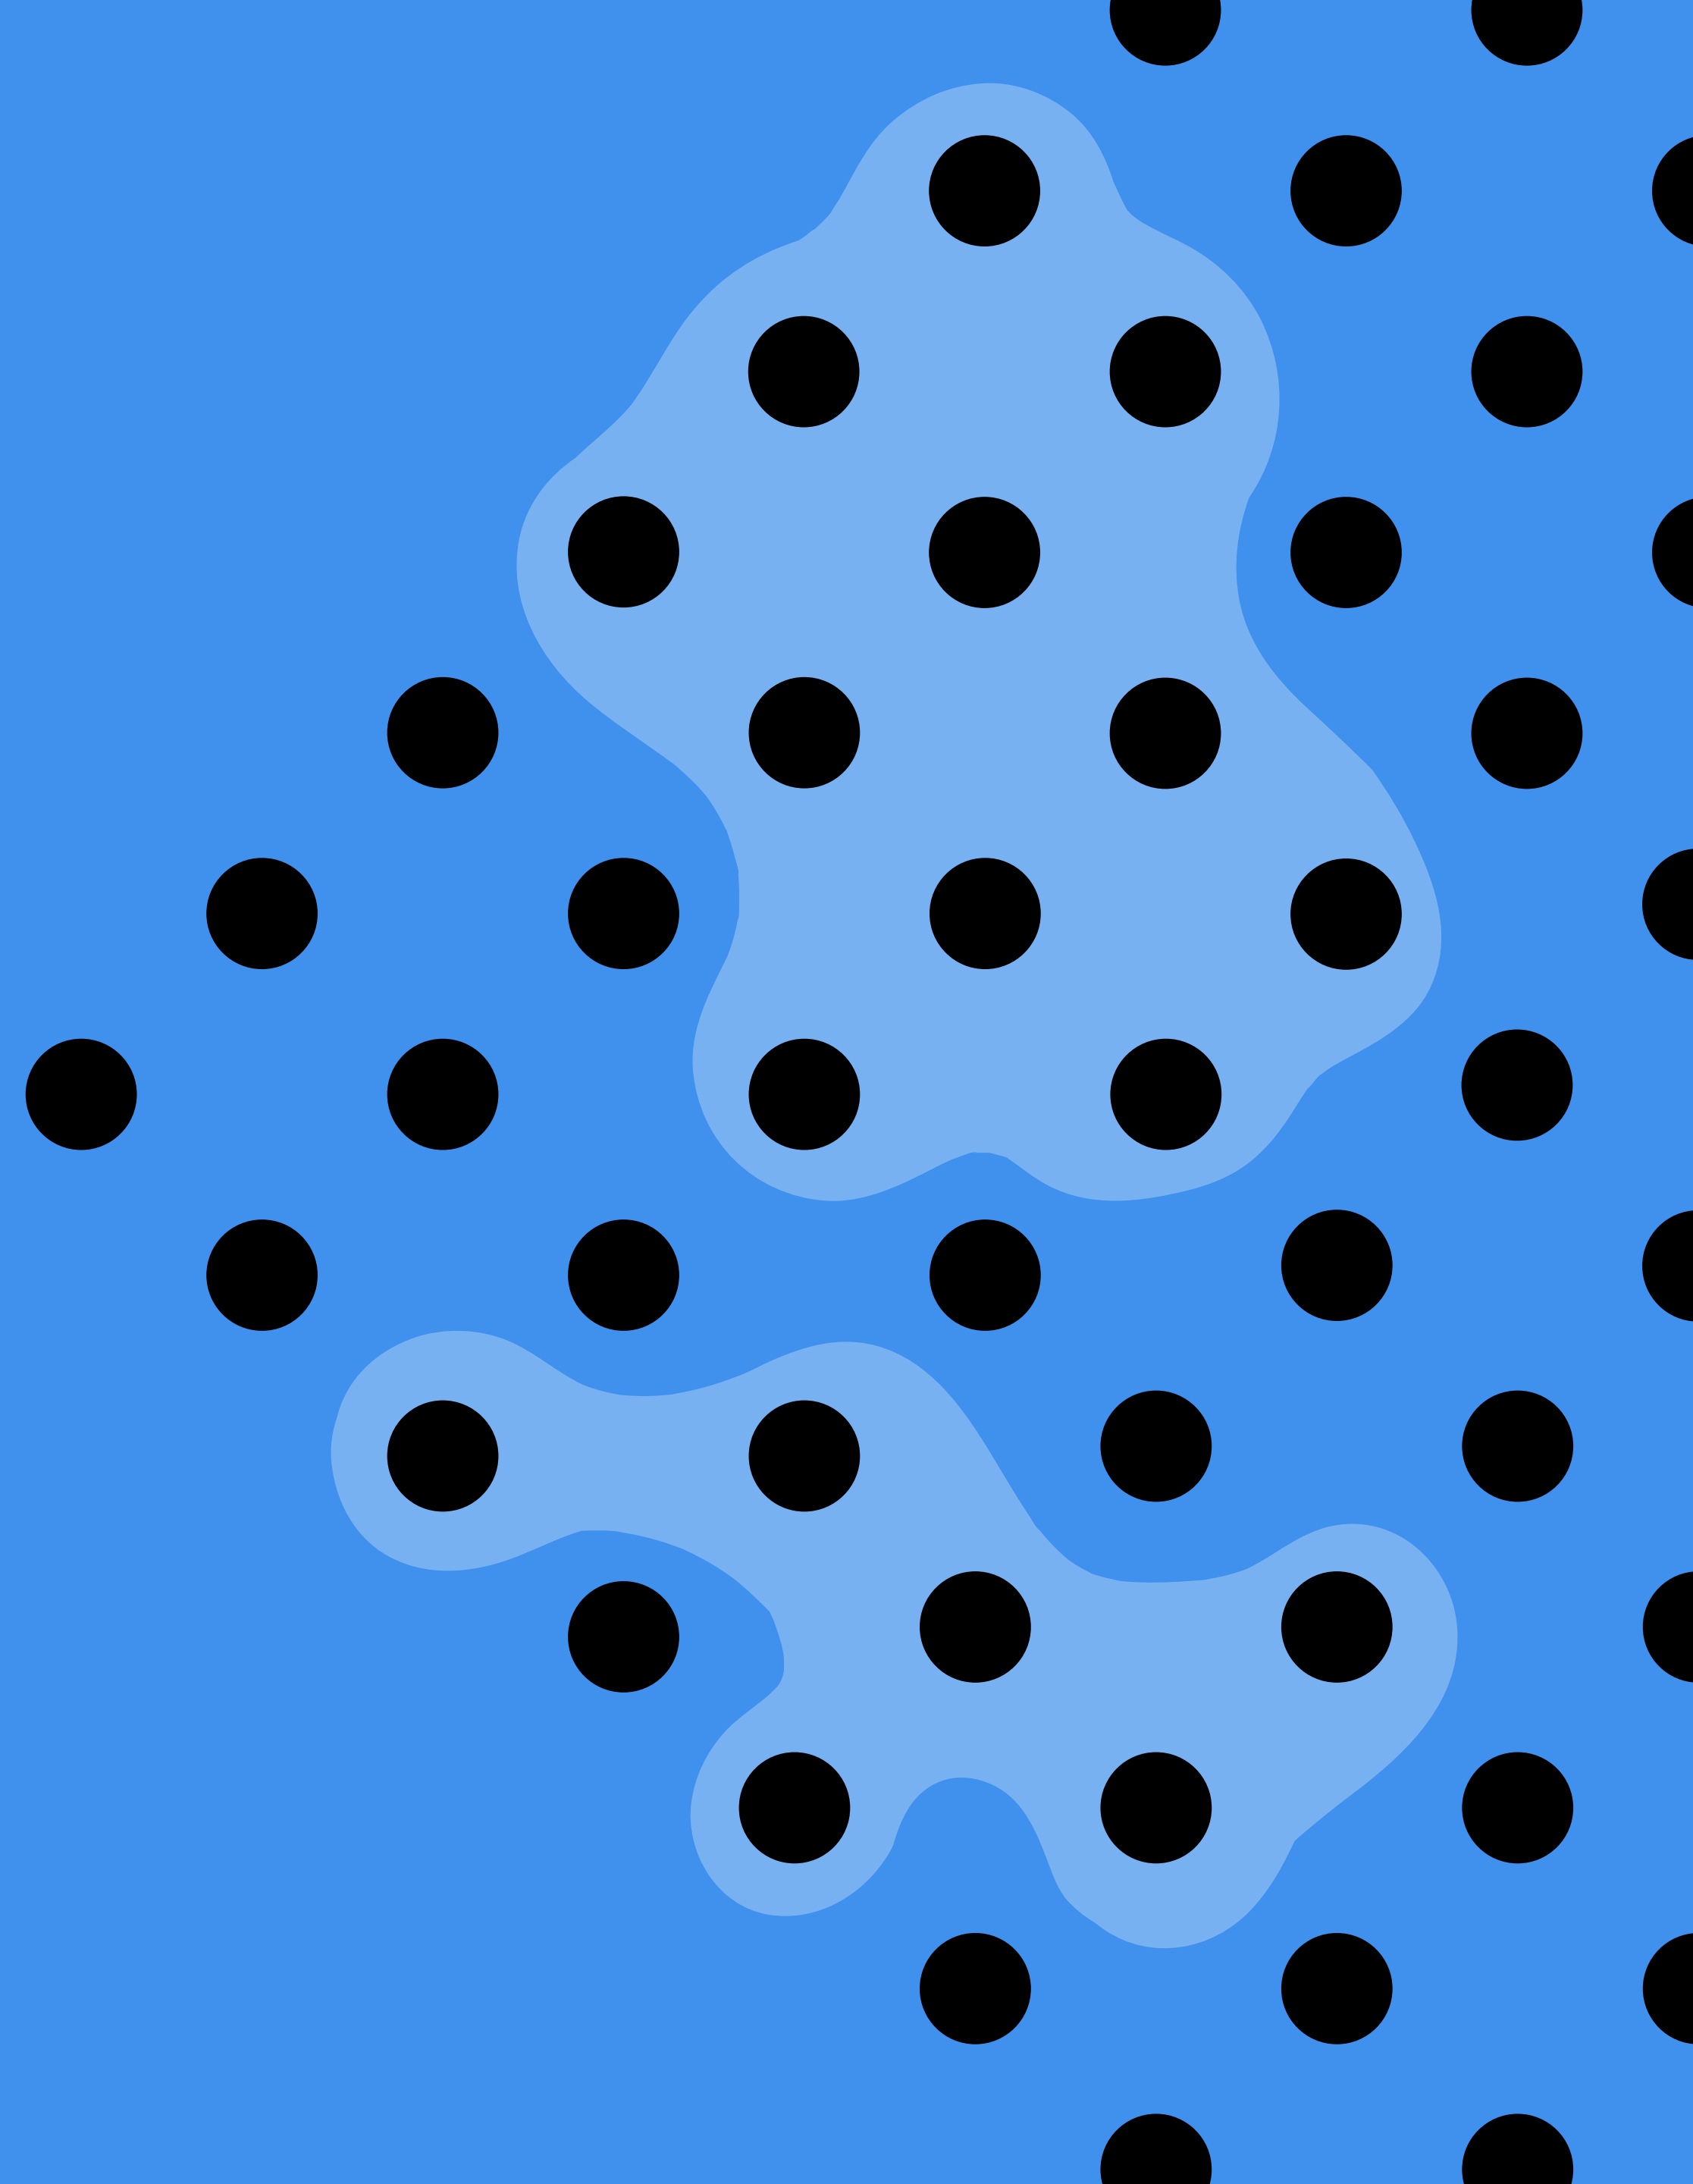

allowing all young project leaders to be highlighted. All young fellowships can apply for this event. \$Super holders can elect their favorite project, which will be highlighted for a month on the site.

2

A springboard booster,

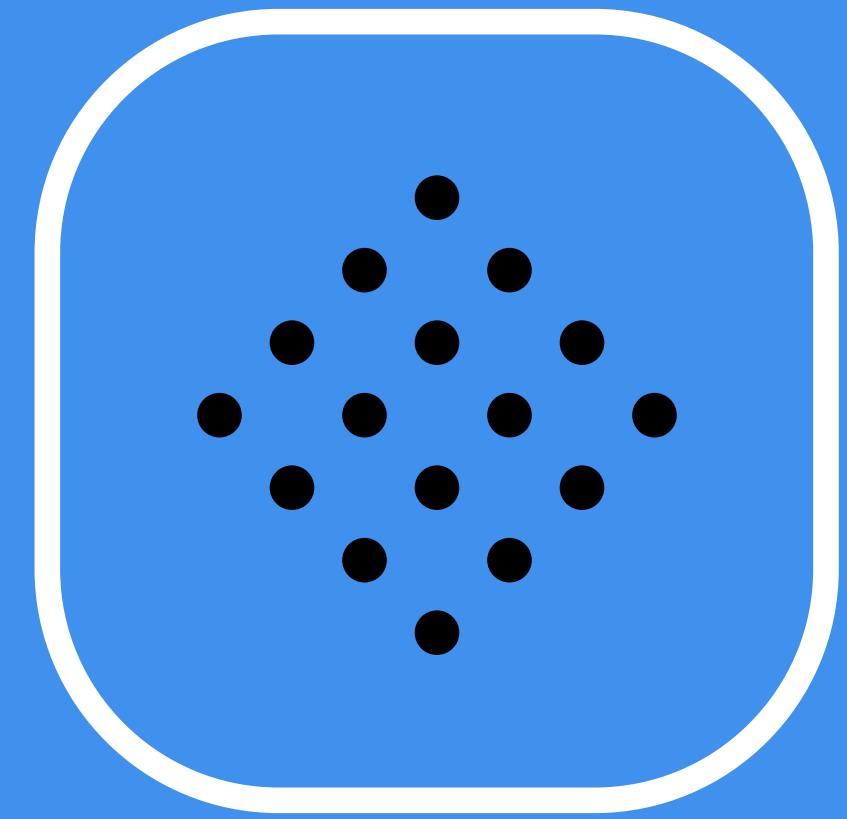

allowing all fellowships to present their projects under construction and to request participatory funding. \$Super holders can vote for their favorite project which will be promoted for a month on the site. A \$Super pool will be open for two weeks for the winning project! The fellowship can now use those \$Super for contributions! The fellowship will be offered to provide tokens of their platform or other things as rewards to the donors.

**How does
it work?**

Any user with a Maiar account can create a **SUPERID** and then log on to the platform and create a Fellowship in a matter of seconds.

To ensure clarity on the different metrics used for the visibility of all the projects on the platform, titles are granted. To qualify for a new rank, the individual fellowships must meet the predetermined criteria. Once the criteria are met, the passage to the next rank is enabled by way of a smart contract.

A general overview of the titles are as follows:

Young Fellowship

A minimum of information is required to be visible on the site. Once the project is submitted, it becomes visible only to contributors. All of the contributors involved must validate it in order to grant it the status of young fellowship, thus making the project visible to all.

Fellowship

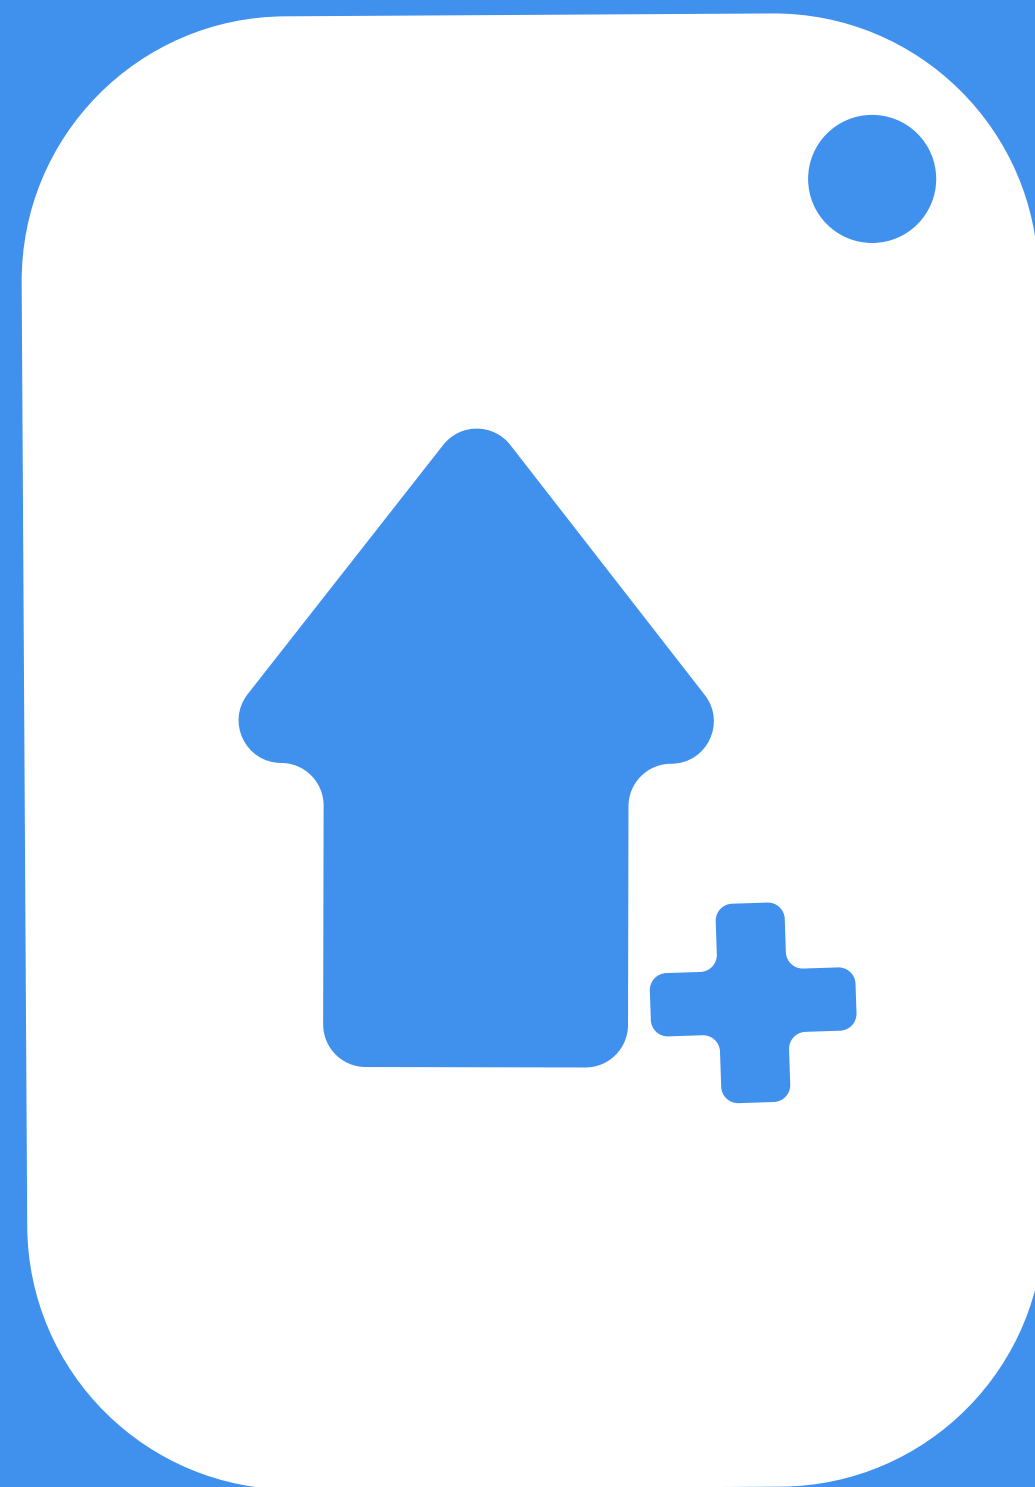

This is the common grade given to communities that have been built and **projects that have actually been launched!**

Grand Fellowship

The exceptional grade given to the most successful projects in the ecosystem, these projects have at least **1000 registered members and an active community.**

Partner Fellowship

This rank is awarded to projects that have developed a partnership relationship with the Superciety project.

**To qualify for a new rank,
fellowships must apply on
the platform via a form.**

**The holders of the \$SUPER
token then decide whether
or not the fellowship will
move up to the next rank!**

To be a Contributor you must establish a **SuperID**.

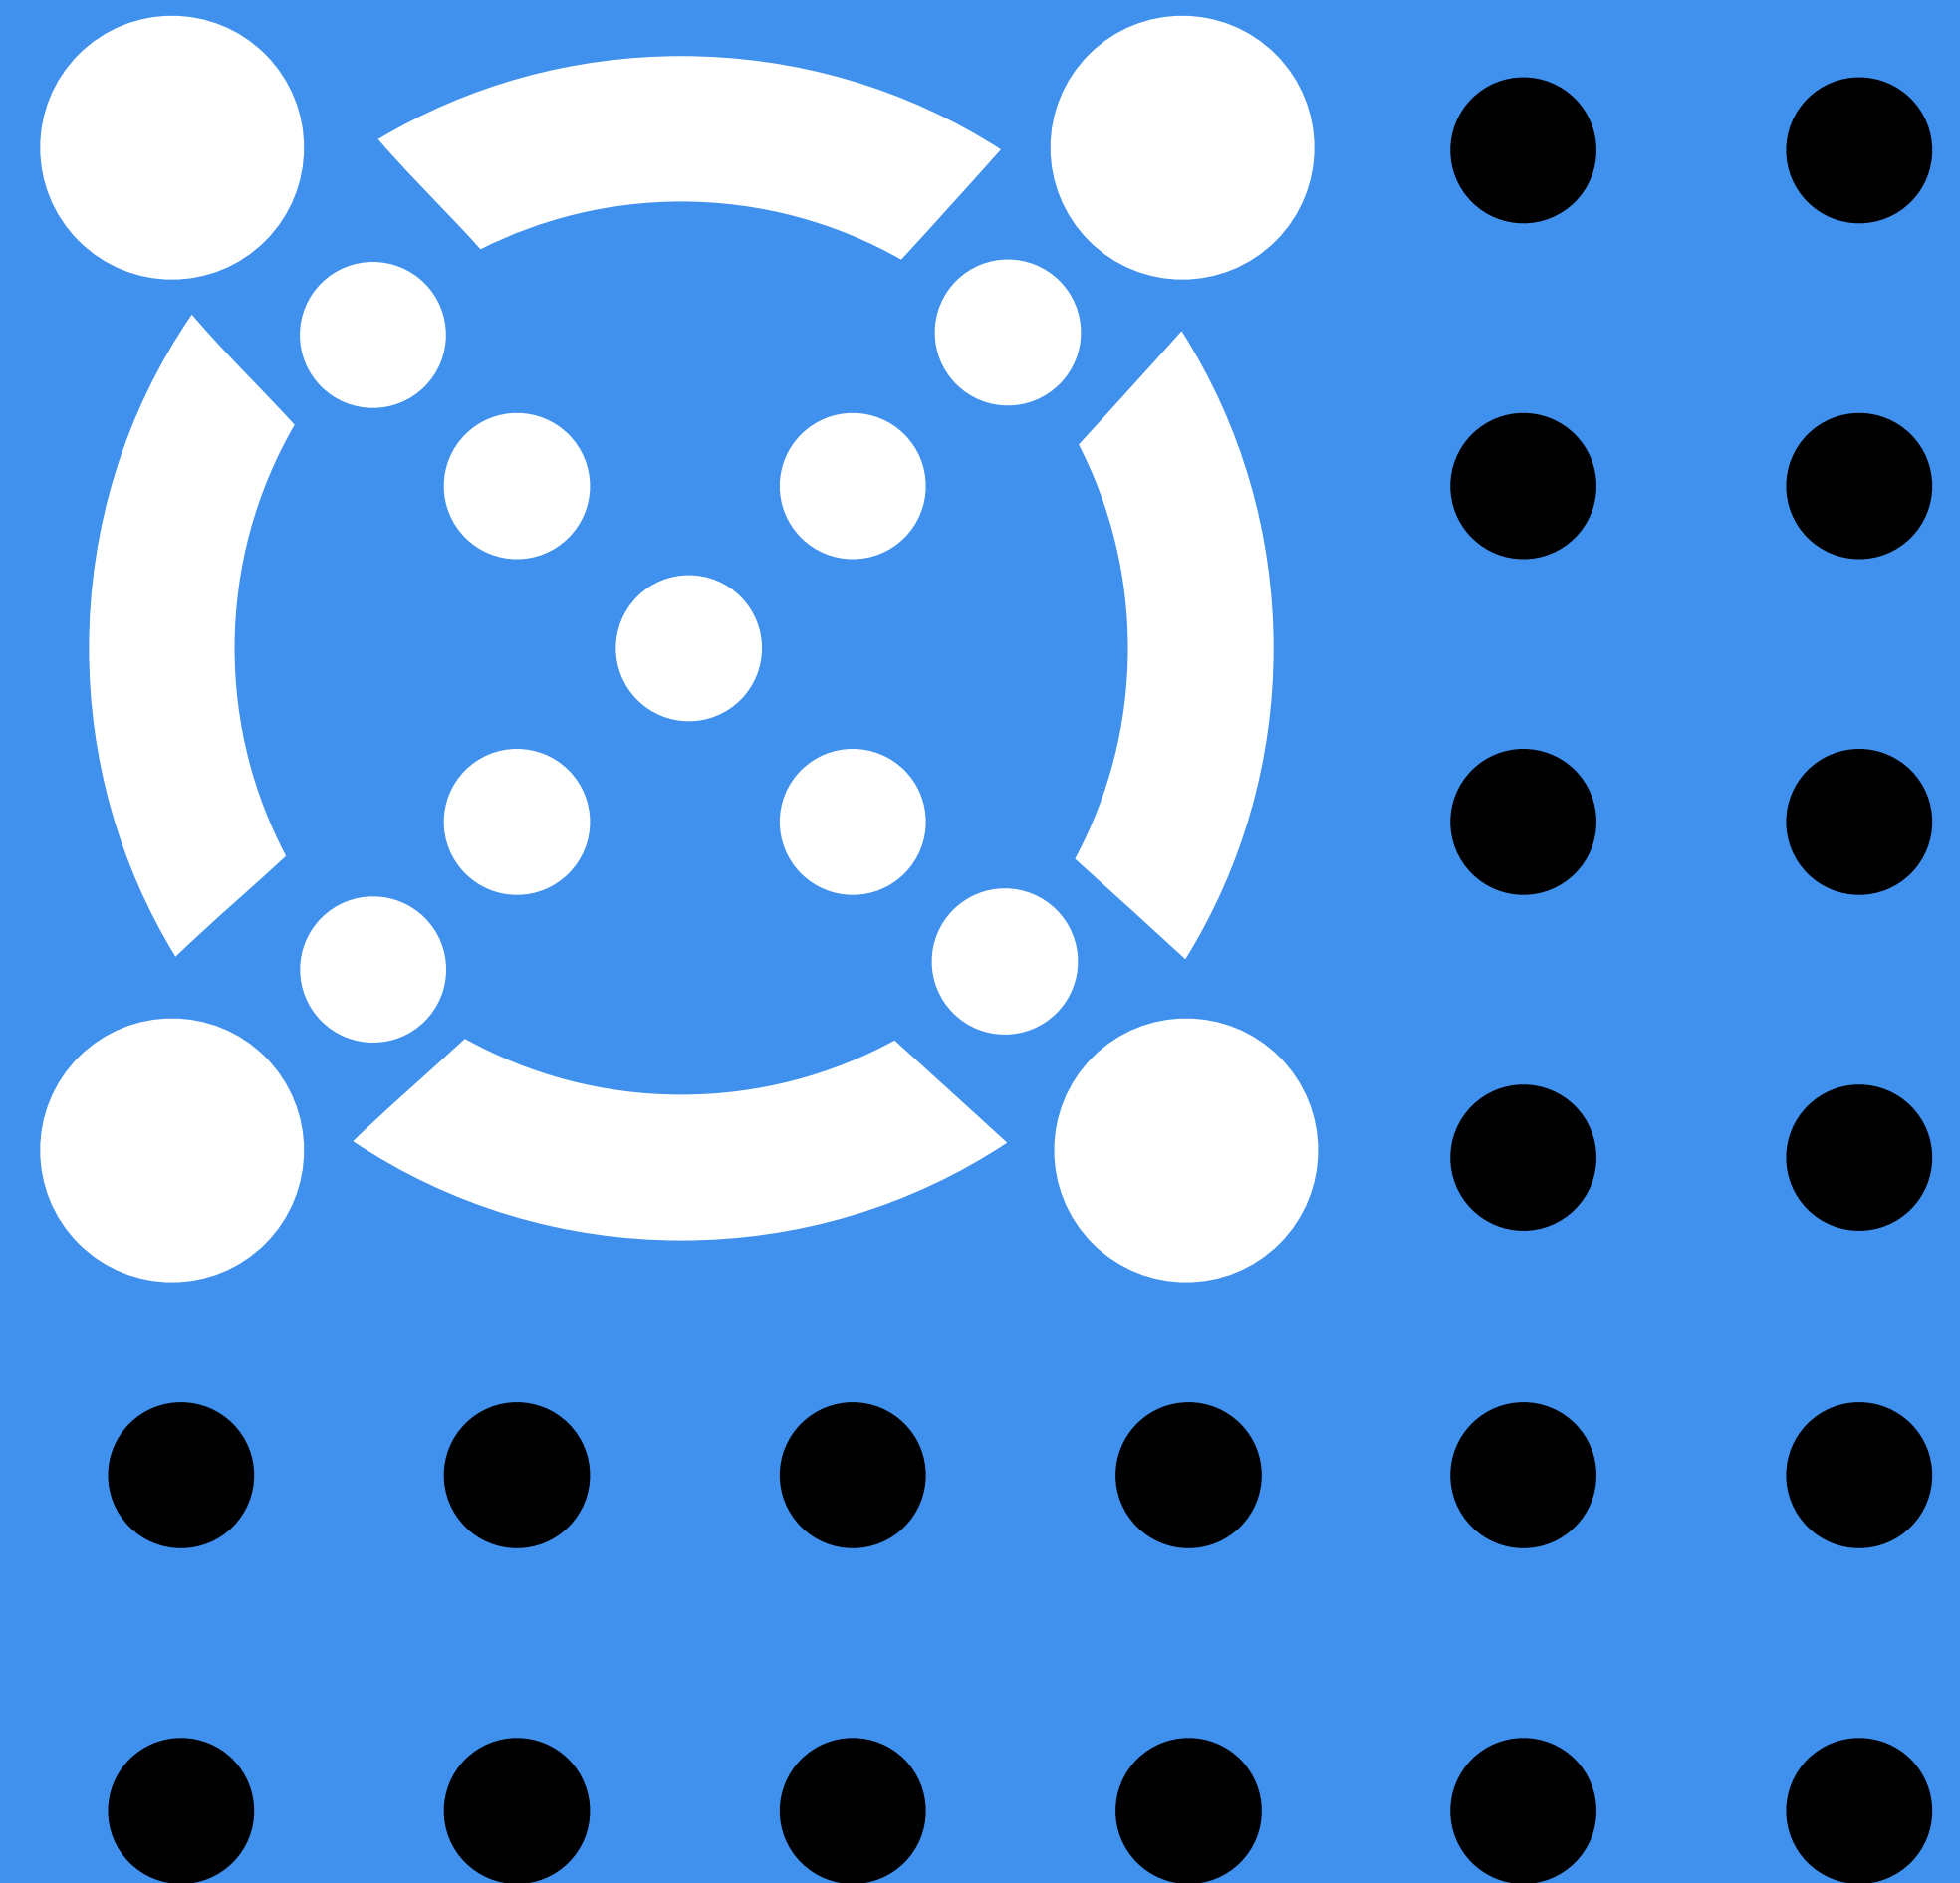

This is a tool to help people get to know you, your skill sets, your talents, and your ratings in Superciety.

Anyone can see how helpful any Supercitizen has been in the past, and follow their history and contributions.

SuperID

On choosing Elrond Blockchain

To become an internet-scale blockchain you need **speed** (transaction throughput & finalization) and **simplicity**.

Without speed, the blockchain will be in a constant state of congestion. Without simplicity, you won't even get to congesting your blockchain because of lacking user amounts.

We are building on Elrond blockchain because we believe that Elrond will become a global standard for decentralization & immutability of the internet.

With all the exciting growth within Elrond and all of the strategic steps the Elrond team is taking to push mass adoption, Superciety aims to be a central place for projects seeking to build communities of distributed power.

**Specifically,
we chose
Elrond
blockchain
because of:**

- ① Wide distribution of nodes to ensure decentralization**
- ② Popular developer tech stack**
- ③ Enormously fast-growing ecosystem**
- ④ Shared philosophy of extreme simplicity for end-users**
- ⑤ Environmental friendly (branded as Carbon-negative)**

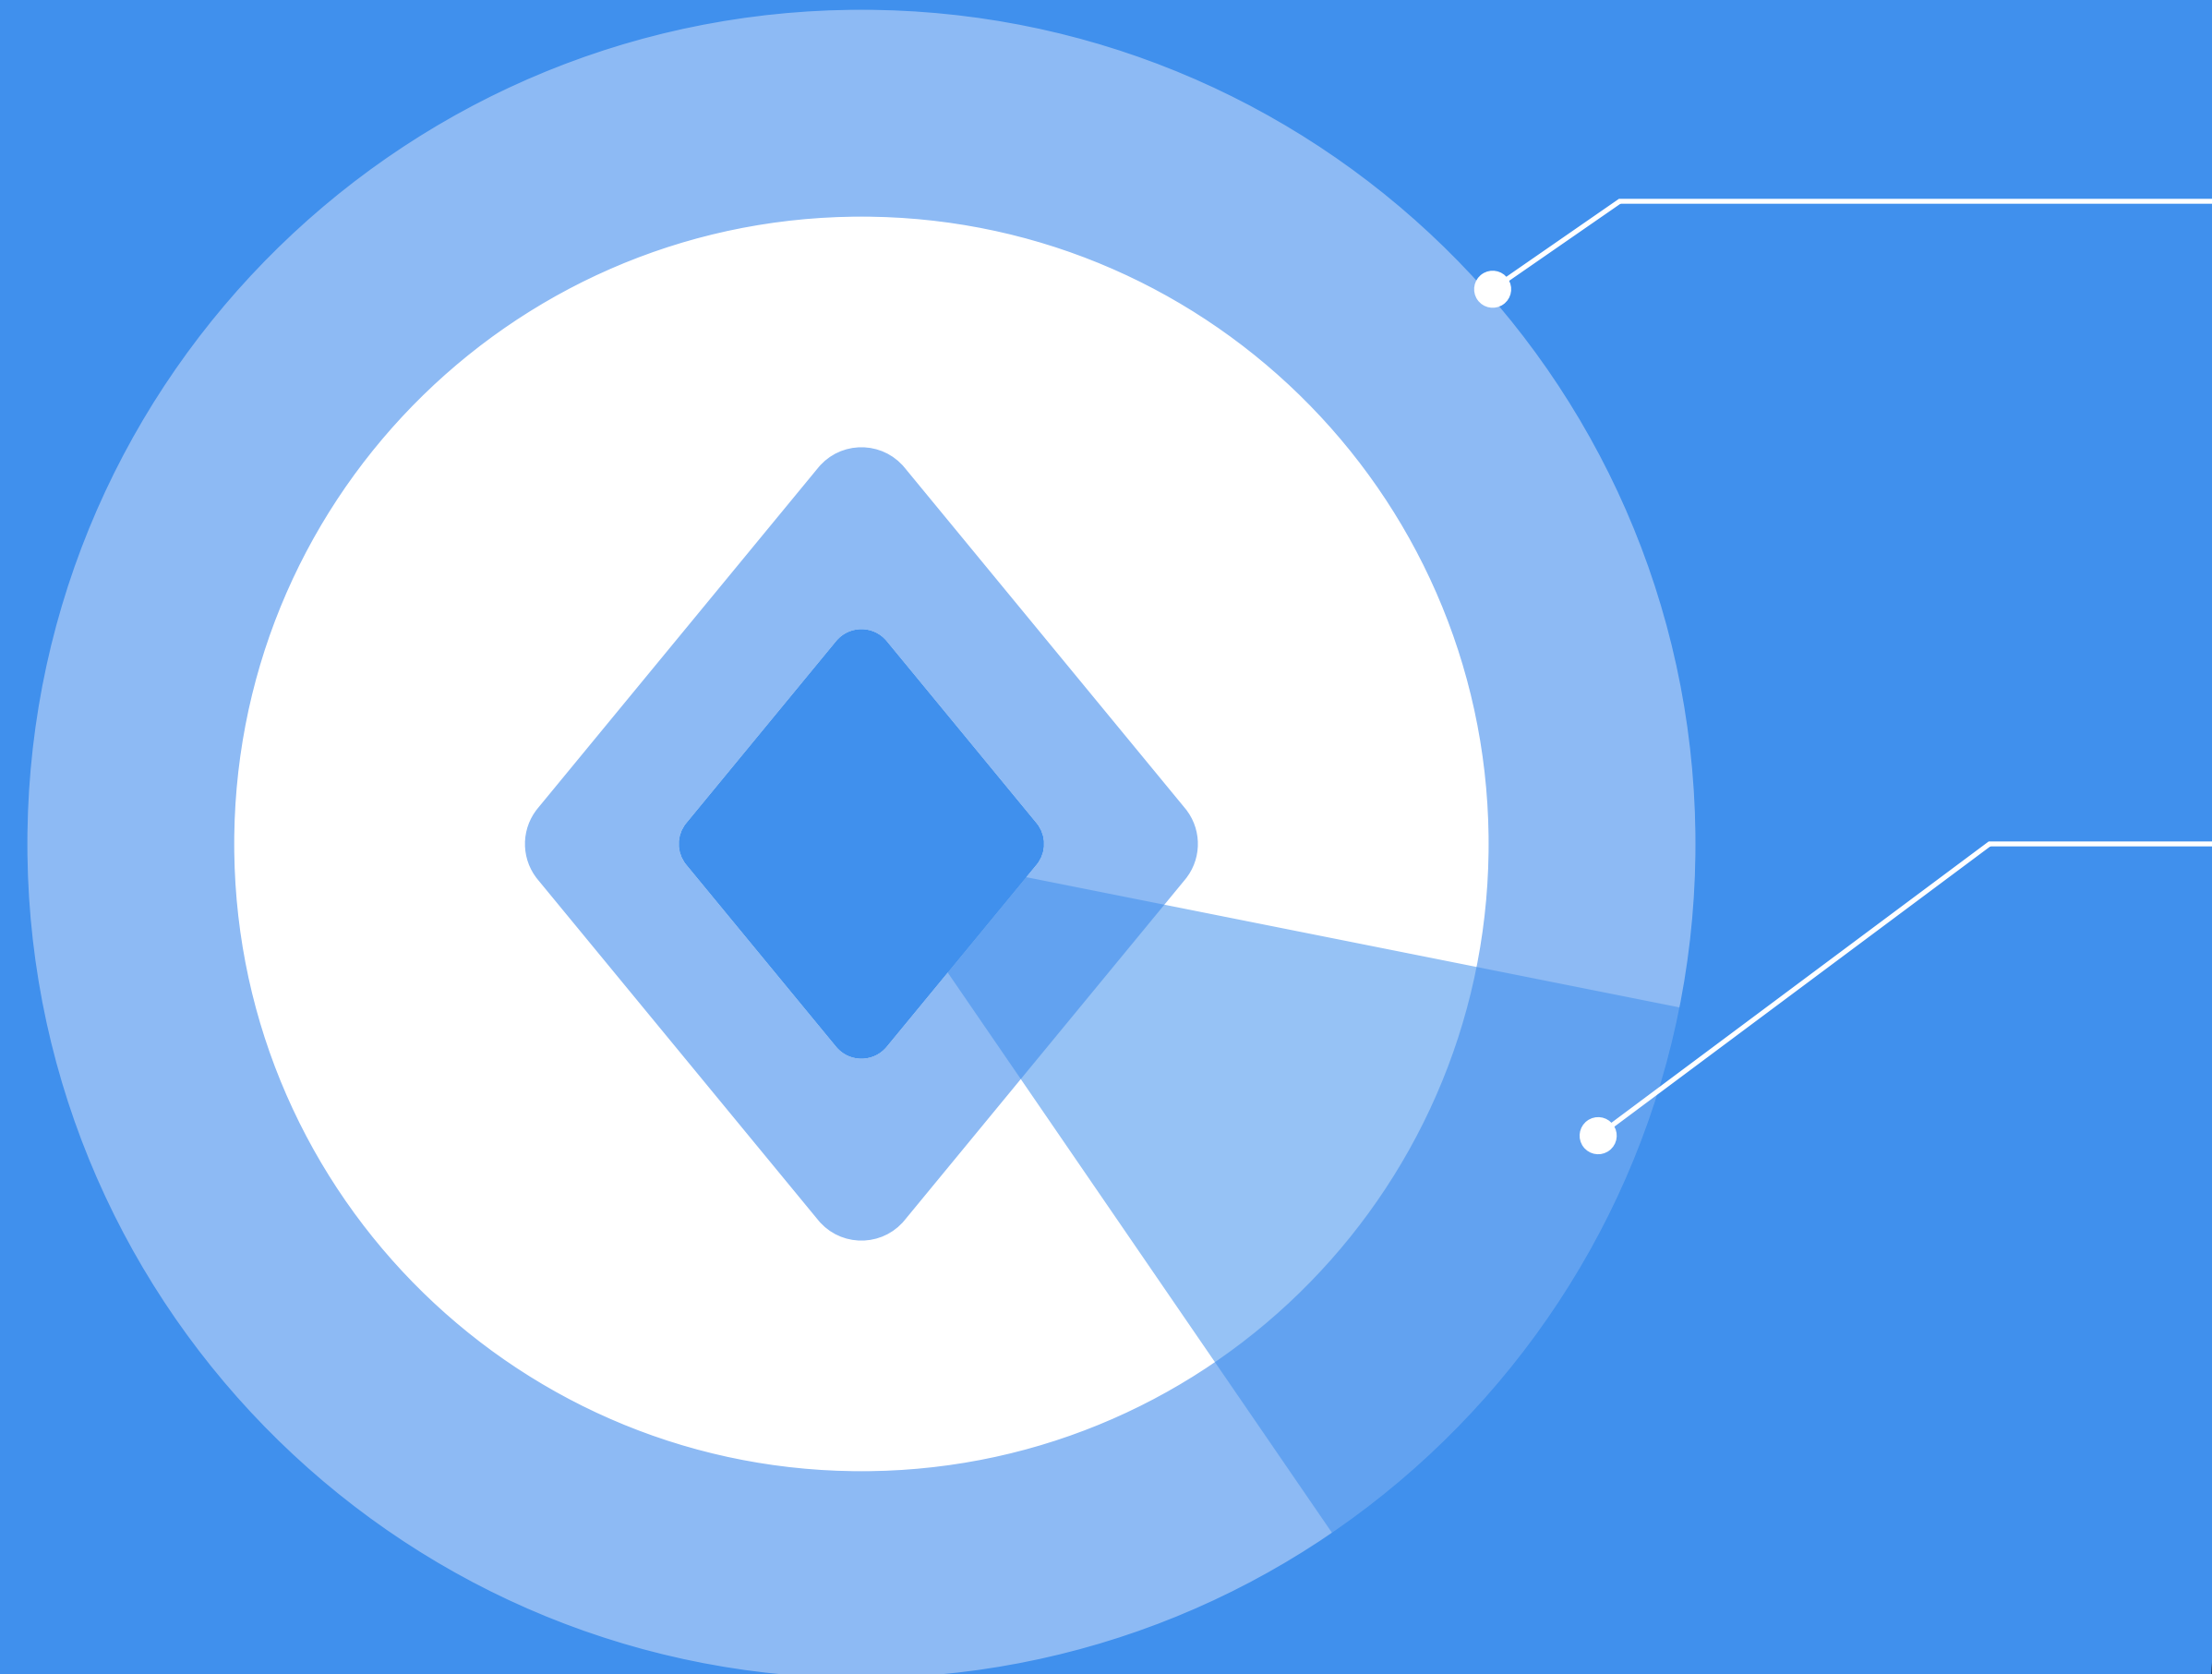

For more information visit elrond.com.

Tokenomics

Initial supply: 10,000,000 

Initially, out of 10,000,000 \$SUPER

80%
8,000,000 \$SUPER

**were available
for public sale**

20%
2,000,000 \$SUPER

**were reserved
for giving away
to the community**
(e.g. airdrop,
giveaways, ...)

**Superciety is a [community project](#).
There are no team reserves.**

2,000,000 

To list on Maiar Exchange, we temporarily locked 2 million \$SUPER tokens from the public sale to provide initial liquidity (with the EGLD equivalent) to our swap pool.

6,000,000 

were sold at an initial price of 0.0001EGLD, which quickly doubled to 0.0002EGLD due to high demand.

1,2 million 

have been distributed to the community in form of airdrops in exchange for shares on Twitter, or other contributions.

Rewards for
contributors
of Fellowships

MINT

Costs of
services

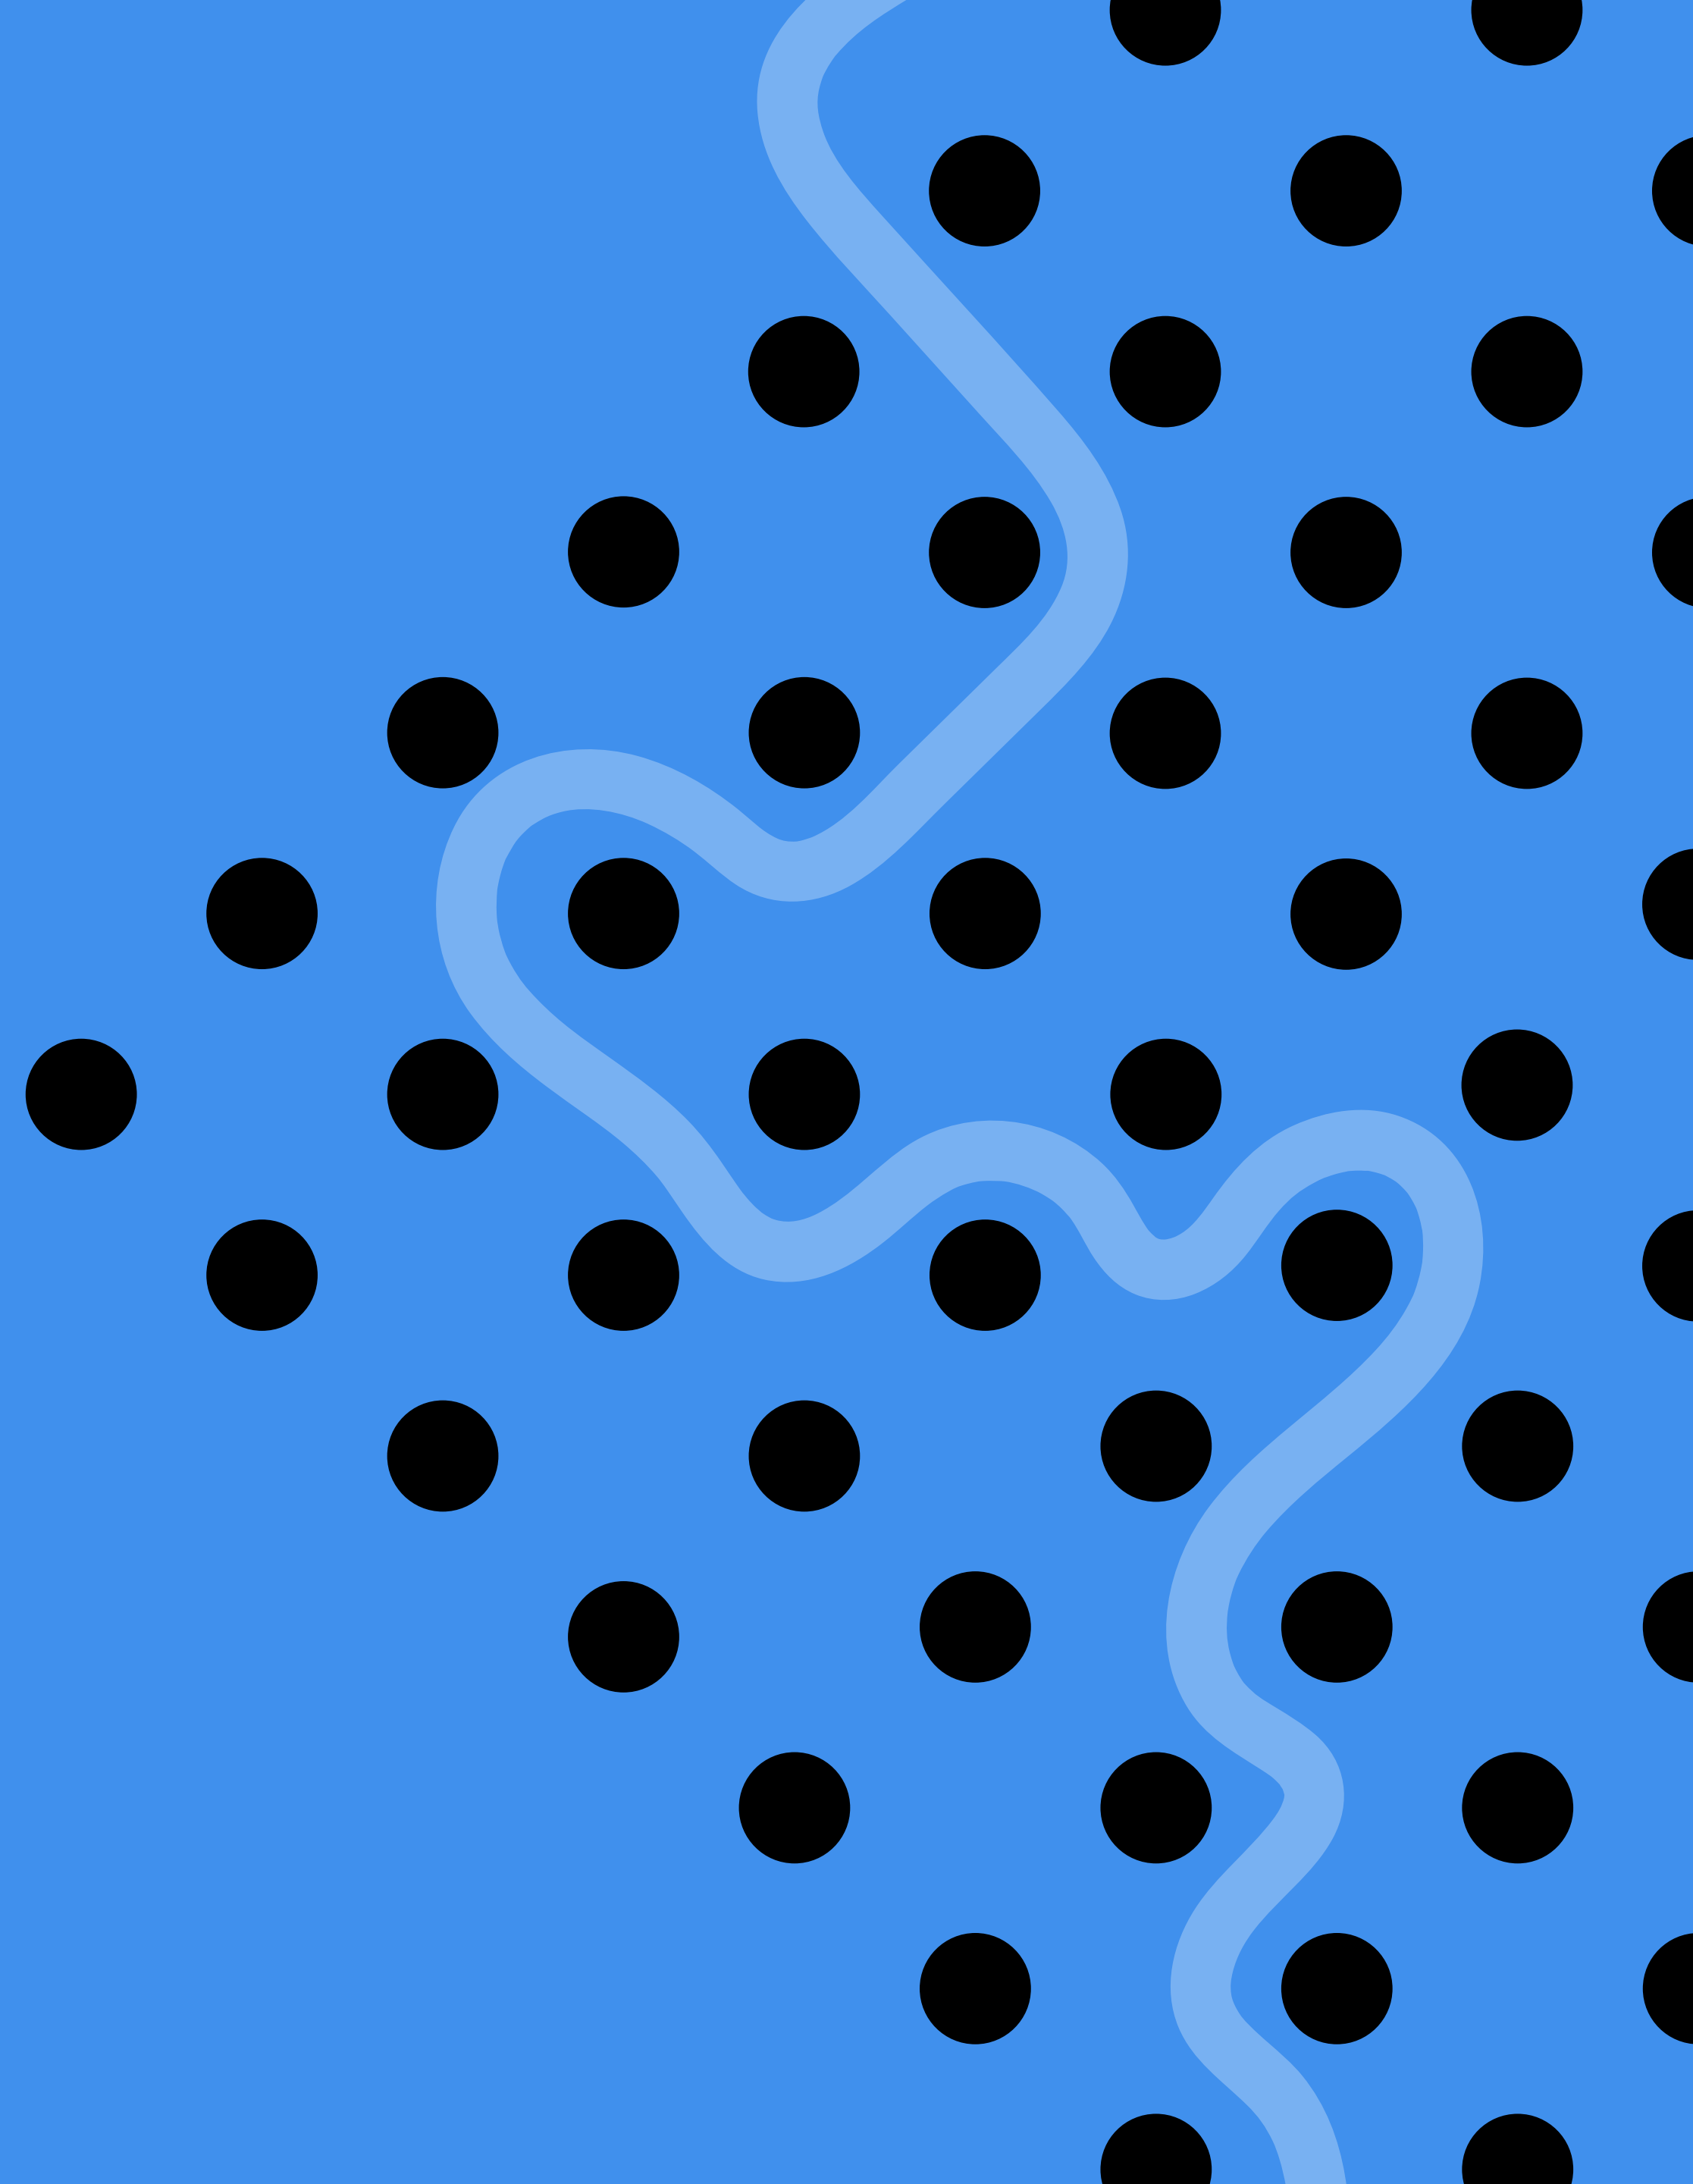

BURN

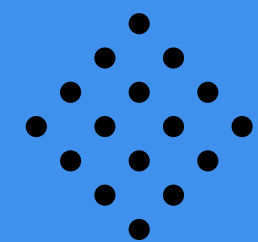

Rewards for contributors of Fellowships will be newly minted, while strong burning mechanisms (for costs of services) in Superciety will control the supply – potentially making **\$SUPER** deflationary in the long-term.

The specifics of these mechanisms will be determined by **Supercitizens** through community voting.

With these factors in mind, the **Superciety ecosystem** is designed to shift wealth & voting power to those who are deliberately useful to the common good.

The general spirit is that we improve products incrementally once they are out with feedback from our users.

Builders

Superciety is a community project.

Initially started by Micha Vie, founder of the company and app Freeiam (freeiam.com), we have now assembled dozens of builders & experts from all over the world who seek to make Superciety a reality for all of us.

Anyone who wants to contribute can contribute.

This is Superciety!
